

Engravings - font & color information

Fonts:

Almost all fonts that you have installed on your computer can be used. If it is a font that is not part of a current Windows installation by default and that you have downloaded etc., you can make it available to us free of charge so that we can use it for your engraving. Please check the licence of the font in advance to see whether it may be used for commercial purposes and whether you have to pay licence fees. We will not check this and the licence will not be purchased.

Colours:

The following colours are available in which we can design your engraved parts for you.

Please note that depending on the monitor you are using, the colours may differ greatly from the original. It is best to use the RAL colour shades as a guide. Please note that the colours are only based on the RAL colour tones and are not 100% identical.
